

Buddy FootSwitch 7G QuickStart Guide

System Requirements

Windows XP SP2 or higher, Windows Vista, Windows 7, Mac OS 10.4 and Linux 2.6 and higher

Installing your Buddy FootSwitch 7G

1. Plug the USB A-B cable into the back of the FootSwitch 7G base.
2. Plug the device into any USB port in your computer.
3. Windows will now automatically load the appropriate drivers and configure the device.

Once the Device has been Installed

1. If the device is unresponsive, make sure Windows has recognized your Buddy FootSwitch 7G.
2. To verify that Windows has located the appropriate 7G device, go to Control Panel>Hardware and Sound>Devices and Printers.
3. If Windows has recognized the device, look under Devices. Windows will display a thumbnail of a keyboard with "Buddy FootSwitch 7G" below it.

Default Device Functions

Default Device functions are joystick actions to be integrated with third party applications. To fully customize your Buddy FootSwitch 7G, download our free MyBuddyMic customization software free from our website at <http://www.insyncspeech.com>.

Customizing Device Functions

To fully customize the device functions, please visit our website at <http://www.insyncspeech.com> and download our free MyBuddyMic customization software.

Speech Recognition

We have created our line of Buddy 7G products with speech recognition applications in mind. These devices yield high accuracy rates when used with Dragon NaturallySpeaking and other popular speech recognition software.
