

Buddy HeadsetMic DM 101 QuickStart Guide

System Requirements

Windows XP SP2 or higher, Windows Vista, Windows 7, Mac OS 10.4 and Linux 2.6 and higher

Installing your Buddy HeadsetMic DM 101

1. Plug the 3.5mm connector into your audio input jack on your sound card.
2. Windows will now automatically detect the device.

Once the Device has been Installed

1. If the device is unresponsive, make sure Windows has recognized your sound card as the "default device" for audio input. Open Control Panel>Hardware and Sound>Sound>Manage Audio Devices.
2. Locate the appropriate sound card and click "set default". This ensures that your device is recognized by Windows as your default recording device.
3. If running speech recognition software, use the embedded features to set up your sound pod/microphone pairing for speech recognition.
4. If the device is being used simply as a recording or VoIP device, configure the device in Windows for optimal sound quality. This can be done via Control Panel>Hardware and Sound>Sound>Manage Audio Devices. Once here, select the device and click "configure". Windows will then guide you through a quick optimization process.

Plug into sound card

Buddy HeadsetMic DM 101

Speech Recognition

We have created our line of Buddy 7G products with speech recognition applications in mind. These devices yield high accuracy with Dragon NaturallySpeaking and other speech recognition software.
