ME3 Plug Adapter

This unique adapter is designed to convert the unusual plug on the Sennheiser ME3 microphone to a standard 3.5 mm TRS plug for integration of your ME3 with a computer sound card, digital recorder or other device. The adapter was manufactured exclusively for Speech Recognition Solutions and to our exacting standards.

Why the need for this adapter? The ME3, while working extraordinarily well with speech recognition software, was actually made for stage entertainers and with the expectation of being connected to a belt work wireless transmitter. The locking ring built into the plug on the ME3 is designed to prevent accidental unplugging for the performer, but when used without the adapter, the locking ring prevents the plug on the ME3 from fully inserting into the appropriate jack on sound cards and computers. The adapter deals with this issue.

Sennheiser ME3 Plug

Standard Audio Plug

Does the adapter assure compatibility with all sound cards? No. It turns out that Sennheiser manufactures the ME3 with a non-standard wiring pattern, with reversal of the tip and base connection on the 3-prong plug. While most sound cards are compatible with the ME3 as wired, there is an occasional sound card (internal or external) that is not. There is nothing about the ME3 adapter which changes the wiring or will make it compatible with a sound card with which it would otherwise not be compatible.

Using the adapter:

1. Insert the ME3 plug <u>firmly</u> into the adapter, enough that the threads on the locking ring mesh with the threads on the adapter.
2. Rotate the locking ring <u>clockwise</u> to engage the threads and pull the plug firmly into the adapter.

Warranty: Lifetime replacement warranty by Speech Recognition Solutions
